```
import numpy
import pandas as pd
import tz_pages_helpy2
import tz_pages_helpy
%matplotlib inline
%load_ext autoreload
%autoreload 2
import matplotlib.pyplot as plt
import sys
```

设定一个数据分析工作目录，数据保存

```
cd = '/home/jovyan/work/data/stock/stocks/shanghai_300_20_alpha'
%cd{cd}
%ls -l{cd}{sep}*.'$basicinfo.2.checkstock.total'$ma'$d'$d'.2.20_21.kepp$kdmkdl$kl$kl.2.20.1$RMRA.line'$ema'ema'$ema'.2.0.1'$ema'$ema'$ema'.2.0.1'
```

```
/home/jovyan/work/data/stock/stocks/shanghai_300_20_alpha
total 0
-rw-r--r-- 1 jovyan 1000 0 "Basicinfo.2.checkstock.total 300 10 0 20_21.kepp$kdmkdl$kl$kl.2.20.1$RMRA.line 60ema'ema'ema'ema'.2.0.1'$ema'$ema'$ema'.2.0.1'
```

```
sep = '/usecsv/'
ma = '/usecsv/ma/'
```

定义数据目录

```
from tz_pages import basicfilelist
ma_file_dir=basicfilelist(ma,ma,'.ma')
data = sep.join(ma_dir+'MA'+str(ff)+'MA0000')
```

```
df0 = pd.read_csv(ma_dir+data+'.ma')
```

数据保存为当日日期格式

```
import datetime
df0.to_csv(ma_dir+data+'.'+str(datetime.date.today())+'.ma')
df0.tail(2)
```

```
Unknown_ma_dir=ma_dir+'Unknown/'
```

数据目录

```
ma_dir=ma_dir+'/'
ma_dir
```

```
'/usecsv/ma/'
```

```
'/usecsv/ma/'
```

```
'/usecsv/ma/'
```
